DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 3-3-04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to regarding foreign patent documents therein has not been considered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kirino et al in view of Takahashi et al.

Kirino et al discloses a manufacturing process of a perpendicular magnetic recording medium. A disordered anti-ferromagnetic layer is formed on a substrate followed by two soft magnetic layers (col 16, lines 40-67; col 20, lines 25-42).

Kirino et al does not explicitly disclose wherein every step is carried out while applying a magnetic field having a component parallel to the substrate.

Takahashi et al discloses forming steps carried out while applying a magnetic field having a component parallel to a substrate (col 19, lines 10-15).

It would have been obvious to one with ordinary skill in the art to include forming steps carried out while applying a magnetic field having a component parallel to a substrate because Takahashi et al teaches multiple magnetic domains desired in the art (col 1, lines 32-58).
